Docker image setup notes:

Pull docker image from Docker hub:

```
$ sudo docker pull waggle/plugin-tensorflow:2.0.0
```

Note: the plugin-tensorflow-ros:v5 is made based on Nvidia ML Container for Jetson:

```
docker pull nvcr.io/nvidia/l4t-ml:r32.4.2-py3
```

Launch docker container:

```
$ sudo docker run -it nvcr.io/nvidia/l4t-ml:r32.4.2-py3 /bin/bash
```

Install lsb_release for bash:

```
# apt-get update && apt-get install -y lsb-release && apt-get clean all
```

Install ROS melodic, refer to [melodic/Installation/Ubuntu - ROS Wiki]

Note: Choose ros-melodic-ros-base

Set up ROS workspace refer to [ROS/Tutorials/InstallingandConfiguringROSEnvironment - ROS Wiki]

Note: choose Python3 as executor and put carkin_ws/devel/setup.bash into .bashrc

Here python3 needs several packages installed:

```
# pip3 install catkin_pkg
```

Get video_stream_opencv package into ROS workspace:

```
# git clone https://github.com/ros-drivers/video_stream_opencv.git
~/catkin_ws# rosdep install video_stream_opencv
# pip3 install rospkg
# catkin_make -DPYTHON_EXECUTABLE=/usr/bin/python3
```

Rosdep install is equivalent to:

```
# apt install ros-melodic-cv-bridge
# apt install ros-melodic-image-transport
# apt install ros-melodic-camera-info-manager
```

Set up darknet object detection demo in ROS:

```
# git clone --recursive https://github.com/leggedrobotics/darknet_ros.git
# pip3 install empy
```

Then build the darnet ros package:

```
# catkin_make -DPYTHON_EXECUTABLE=/usr/bin/python3 -DCMAKE_BUILD_TYPE=Release
```

Download weights:

```
cd catkin_ws/src/darknet_ros/darknet_ros/yolo_network_config/weights/
apt install wget
wget http://pjreddie.com/media/files/yolov3.weights
wget http://pjreddie.com/media/files/yolov3-tiny.weights
```

Set up Tensorflow object detection with ROS:
Ref: https://github.com/osrf/tensorflow_object_detector

```
sudo apt-get install python3-opencv
sudo apt-get install ros-melodic-image-view
pip3 install Pillow
sudo apt-get install ros-melodic-vision-msgs
sudo apt-get install libxml2-dev libxslt-dev
pip3 install tensorflow-object-detection-api

# Allow containers to communicate with Xorg
$ sudo xhost +si:localuser:root
$ sudo docker run --runtime nvidia --network host -it -e DISPLAY=$DISPLAY -v
/tmp/.X11-unix/:/tmp/.X11-unix --device=/dev/video0:/dev/video1
liangkailiu/plugin-tensorflow-ros:v5
```

Open another terminal connected to the same container:

```
docker exec -it <container> bash
```

TF2 and TF1 syntax:

1. od_graph_def = tf.GraphDef() AttributeError: module 'tensorflow' has no attribute 'GraphDef'
2. module 'tensorflow' has no attribute 'ConfigProto' · Issue #33504 · tensorflow/tensorflow
3. AttributeError: module 'tensorflow' has no attribute 'Session' · Issue #18538 · tensorflow/tensorflow

CUDA cmake issue:

```
[43%] Linking CXX shared library
/root/catkin_ws/devel/lib/libdarknet_ros_lib.so
/usr/bin/ld: cannot find -lcuda
collect2: error: ld returned 1 exit status
darknet_ros/darknet_ros/CMakeFiles/darknet_ros_lib.dir/build.make:3733: recipe
for target '/root/catkin_ws/devel/lib/libdarknet_ros_lib.so' failed
make[2]: *** [/root/catkin_ws/devel/lib/libdarknet_ros_lib.so] Error 1
CMakeFiles/Makefile2:2708: recipe for target
'darknet_ros/darknet_ros/CMakeFiles/darknet_ros_lib.dir/all' failed
make[1]: *** [darknet_ros/darknet_ros/CMakeFiles/darknet_ros_lib.dir/all] Error
2
Makefile:140: recipe for target 'all' failed
make: *** [all] Error 2
Invoking "make -j4 -l4" failed
```

Solved. Refer to https://github.com/apache/incubator-mxnet/issues/8436

Find and link *libcuda.so.1* to */usr/lib/aarch64-linux-gnu/libcuda.so*

```
sudo ln -s /usr/local/lib/libcuda.so.1 /usr/lib/aarch64-linux-gnu/libcuda.so
```

OpenCV4 Issue with ROS:

```
nvidia@nvidia-desktop:~$ sudo docker run -it plugin-tensorflow-ros /bin/bash
[sudo] password for nvidia:
root@e2e7604628c5:/# roslaunch darknet_ros
darknet_ros.launch      object_detection.test

Solved. The problem is solved when OpenCV is 3.4.0 and CUDA is 10.2.

Nvidia Jetson docker link issue:

```
nvidia@nvidia-desktop:/usr/local/cuda-10.2/targets/aarch64-linux/lib$ sudo
nvidia-container-cli -k -d /dev/tty info

request
```

Solved. After reflashing the whole system on Jetson AGX board, the issue is solved.

ROS cv_bridge issue with OpenCV4:

```
nvidia@nvidia-desktop:~/projects/catkin_ws$ catkin_make

CMake Error at /opt/ros/melodic/share/cv_bridge/cmake/cv_bridgeConfig.cmake:113
(message):
  Project 'cv_bridge' specifies '/usr/include/opencv' as an include dir,
  which is not found.  It does neither exist as an absolute directory nor in
  '${{prefix}}//usr/include/opencv'.  Check the issue tracker
  'https://github.com/ros-perception/vision_opencv/issues' and consider
  creating a ticket if the problem has not been reported yet.
Call Stack (most recent call first):
  /opt/ros/melodic/share/catkin/cmake/catkinConfig.cmake:76 (find_package)
  video_stream_opencv/CMakeLists.txt:5 (find_package)

-- Configuring incomplete, errors occurred!
See also "/home/nvidia/projects/catkin_ws/build/CMakeFiles/CMakeOutput.log".
See also "/home/nvidia/projects/catkin_ws/build/CMakeFiles/CMakeError.log".
Makefile:320: recipe for target 'cmake_check_build_system' failed
make: *** [cmake_check_build_system] Error 1
Invoking "make cmake_check_build_system" failed
```

Solved. Solution:

```
nvidia@nvidia-desktop:~/projects/catkin_ws$ roscd cv_bridge/
nvidia@nvidia-desktop:/opt/ros/melodic/share/cv_bridge$ cd cmake/
nvidia@nvidia-desktop:/opt/ros/melodic/share/cv_bridge/cmake$ sudo vim
cv_bridgeConfig.cmake
```

In cv_bridgeConfig.cmake, change “/usr/include/opencv” to “/usr/include/opencv4”:

```
set(_include_dirs "include;/usr/include;/usr/include/opencv4")
```

cv_bridge issue with python3:

Build OpenCV 3.4.0 from source:

```
wget https://github.com/opencv/opencv/archive/3.4.0.zip
[compiler] sudo apt-get install build-essential
[required] sudo apt-get install cmake git libgtk2.0-dev pkg-config
libavcodec-dev libavformat-dev libswscale-dev
[optional] sudo apt-get install python-dev python-numpy libtbb2 libtbb-dev
libjpeg-dev libpng-dev libtiff-dev libjasper-dev libdc1394-22-dev
```

Ref: [https://docs.opencv.org/3.4.0/d7/d9f/tutorial_linux_install.html]

NVIDIA Container Runtime on Jetson:

Ref: [https://github.com/NVIDIA/nvidia-docker/wiki/NVIDIA-Container-Runtime-on-Jetson]
Requires JetPack 4.2.1+
